

PRESS RELEASE SEPTEMBER 2010

AMP launches ruggedized video streamer / server

New York, NY and Cambridge, England –September, 2010.

Advanced Micro Peripherals' – a leading manufacturer of ruggedized, long life embedded video solutions - has introduced a modular IP streamer / server for remote video monitoring applications in defense and critical infrastructure. The [HYDRA](#) system supports up to 9 channels of video streaming along with a single audio input channel. [HYDRA](#) has been designed and tested for both fixed

and mobile applications in the toughest conditions, making use of military grade MIL-DTL-38999 connectors (with dust covers), input power protection for compatibility with vehicle power systems and infra red reflective paint. The system was also created as a modular solution to facilitate the integration of other functions and application code to meet the requirements of specific applications – a service option not available on most streamer products.

The standard IP streamer/server system can be quickly configured over a LAN connection using a regular browser with the operating parameters for each video channel being set individually or as a group. Furthermore, the image quality and bit rate can be optimized to suite the available network bandwidth. [Click here](#) to find out more.

About Advanced Micro Peripherals (www.amp-usa.com)

Advanced Micro Peripherals is a leading manufacturer of embedded video solutions - offering the latest MPEG-4 / H.264 codecs and video overlay / annotation technologies on a wide range of embedded board form factors including PC/104-*Plus*, PCI/104-Express, CompactPCI, PCI and miniPCI modules. Founded in 1993, AMP is focused on rugged, long-life embedded board and system products with supporting software development kits for video capture, annotation, display and recording. From its design center near Cambridge (UK), AMP also offers Design Services to meet the needs of specialized customer requirements.
